WORK EXPERIENCE

Senior Software Engineer

Tentacletech [01/08/2023 – Current]

City: Kuala lampur | **Country:** Malaysia

- I worked as a contractor for a client, focusing on building and maintaining UI components within a React Native mobile application designed for an ordering app. My responsibilities included improving and addressing functionality issues in UI components

Sr. Software Engineer

NISUM [01/03/2021 – 04/08/2023]

City: Karachi | **Country:** Pakistan

- Participated as an offshore asset for the **Macys** client, focusing on the refinement of UI components. This was achieved by implementing a micro frontend architecture approach, with the UI components crafted using both **Vue.js** and Backbone technologies.
- Furthermore, I played a pivotal role in the internal Proof of Concept (POC) for the company. This POC was developed utilizing a combination of **Kafka** and **Azure** features, including Functions app, Key Vault, and schedule triggers.
- Engaged as an offshore resource, I collaborated with a **MotoSport** client to develop and elevate UI components for their web application, simultaneously optimizing its **SEO** performance through various online tools and methodologies. The project adopted a **monolithic** architecture, utilizing a unified codebase to cater to four distinct facets within **Next.js** with **learna**.
- Throughout the process of feature development and enhancement, a strategic approach was maintained. This involved the incorporation of comprehensive **test cases**, ensuring the scalability and dependability of newly introduced functionalities.

Frontend Engineer

NextDegree [01/03/2020 – 27/02/2021]

City: Karachi | **Country:** Pakistan

- Contribute in the development of a web application aimed at creating an advanced **analytics tool** for Unilever Pakistan's data analysis team. This application was built using **React.js** and serves as a valuable resource for guiding decisions regarding the placement of products across various outlets and stores, ultimately influencing future outcomes.
- Dashboard that presents both current and predictive data through a combination of **Charts, Graphs, and Tabular** representations. Leveraging third-party libraries, the dashboard offers a comprehensive visual representation of the data. Additionally, a layer of customization has been added to enhance the features of these third-party libraries, tailoring them to the specific needs of the project.
- To facilitate user interaction and data retrieval, a **multi-step form** system has been implemented. This system enables users to apply filters through a step-by-step process, culminating in the display of desired results on the dashboard. The architecture behind this functionality incorporates **Redux** for state management, **Local Storage** for data persistence, **Cache** for optimized performance, and **Index DB** for efficient data retrieval.

Sr. Software Engineer (Freelance Remote)

Eorbi [10/2020 – 12/2022]

Country: United States

- Develop a **live streaming** application for entertainment purposes on both web and mobile platforms, utilizing **Agora.io** and **ZEGOCLOUD** technologies. This platform facilitates actors in promoting their upcoming or released movies to their audience through live streaming capabilities. The actors are also provided with a live chat functionality, powered by Firebase cloud functions, enabling direct interaction with their viewers.
- Additionally, a ticketing system has been implemented, seamlessly integrated with secure payment gateways such as **PayPal** and **Stripe**. This ensures a safe and reliable ticket purchasing process. To achieve this, robust and **secure APIs** have been crafted using **Node.js** (express), guaranteeing smooth live streaming experiences. These APIs also enable recording of sessions along with the storage of streaming chat history. Secure transactions and payment processes are implemented for ticket purchases, and pertinent data is collected for future analytics, all managed through **MongoDB Atlas** for enhanced scalability and security.

MERN Stack

VServices [10/10/2019 – 25/02/2020]

City: Karachi | Country: Pakistan

- Contributed to the development of a social web application constructed on the **Next.js** stack, with a primary focus on facilitating interactive and shared posts. Within this project, my responsibilities encompassed the construction of essential **UI components** and the implementation of **social login** functionality, spanning platforms such as Facebook, Google, and Apple.
- To ensure the seamless flow of data from the frontend to the **MongoDB Atlas** database, a robust system of **secure APIs** was meticulously crafted using **Node.js** (express).
- In parallel, an associated mobile application was created utilizing **React Native**. This mobile application harmoniously integrated the same socialized post feature, promoting a consistent and cohesive user experience across different platforms.

Associate Software Engineer

Zee Tech [01/03/2019 – 05/10/2019]

City: Karachi | Country: Pakistan

- Developed a comprehensive school management web application by harnessing the capabilities of the **MERN Stack**. My specific tasks revolved around constructing diverse UI components catering to various features, including forms and pages.
- Incorporating a **role-based** system, I seamlessly integrated both **authorization** and **authentication** functionalities to ensure secure and controlled access for users. This allowed us to maintain strict access privileges tailored to individual roles.
- To effectively utilize **secure APIs**, we laid the groundwork for a robust backend, guaranteeing the confidentiality and integrity of the data exchange process.
- For the generation and storage of essential reports, we harnessed the power of the **AWS S3** bucket, ensuring efficient data management and accessibility.
- In the realm of notifications and messaging services, a combination of **Firebase** and **Twilio** was utilized. This dynamic duo enabled us to provide effective communication channels and notifications, enhancing the overall user experience of the application.

EDUCATION AND TRAINING

Master in computer science (MCS)

Karachi University [01/01/2017 – 30/12/2018]

Field(s) of study: Information and Communication Technologies (ICTs): • Software and applications development and analysis

Object-oriented Programming, Data Structures, and Algorithms, Database Development

Bachelor (Statistic's) (BSC)

Karachi University [01/01/2015 – 30/12/2016]

Field(s) of study: Natural sciences, mathematics and statistics: • Statistics

Mathematics, Statistics

Web and App development

APTECH [2016 – 2018]

City: Karachi | Country: Pakistan

DIGITAL SKILLS

React.js / JavaScript / Git / Bootstrap / TAILWINDCSS / JavaScript and Vue.js / React.js, Redux Redux-thunk / Proficient with the Javascript ecosystem (vanilla SPA frameworks NodeJS ExpressJS) / NEXT JS / Nuxt JS / mongo DB / GraphQL api / REST Api's

HOBBIES AND INTERESTS

Digital Content Creation

- Create IT-related content on YouTube (Yar Coder)
- Write blogs related to software engineering topics on **Medium** | **Dev.to** | **Turing**
- Passionate about contributing to open-source projects

Build by me

Eorbi:

1. Link: <https://eorbi.com/>
2. Purpose: (Build to experience virtual cinema)

Currency Converter:

1. Link: <https://chromewebstore.google.com/detail/currency-converter-extens/dmclabfilpimdfkifkfndpgfkffbkkm>
2. Purpose: (Build to convert the single currency to all others in a single click)

Language Translator:

1. Link: <https://chromewebstore.google.com/detail/language-translator/cccbggfgjgfhkneaigmjlbmppngecjn>
2. Purpose: (Build to translate audio/text in any language using Google Gemini)
